which are marshalled to the mapping table 9 of the service requestor. This mapping table 9 maps the output data op1, op2 from common terminology 9b to the first service terminology 9a, which output data serve as a result of the outsourced work task 7.

Amend the Abstract on page 22 and 23 as follows.

Pg.22-23

A3

A method and a computer network for interconnecting a first server computer (112) of a service requestor (1) and a second server computer (122) of a service provider (2), each of the first server computer (112) and the second server computer (122) being connected to at least one client computer (111, 121), the first server computer (112) running a first workflow management system application (3), and the second server computer (122) running a second workflow management system application (4), the method comprising providing a first and a second connector application (5a, 6a) for permitting the first server computer (112) access to a copy of the first connector application (5a) and for permitting the second server computer (122) access to a copy of the second connector application (6a), wherein the copies of the first and the second connector application (5a, 6a) each comprises a connection agreement (8, 12) for a first work task (7) of a first workflow instance (18) encompassed by the first workflow management system application (3).

IN THE CLAIMS:

Amend claim 1 as follows to correct a minor error in reference numerals.

A4

1. (Amended) A method of interconnecting a first server computer (112) of a service requestor (1) and a second server computer (122) of a service provider (2), each of said first server computer (112) and said second server computer (122) being connected to at least one client computer (111, 121);

said first server computer (112) running a first workflow management system application (3), and said second server computer (122) running a second workflow management system application (4);
